e4health

Empowering Better Health

Health Information Management Solutions

HIM Solutions

Save time and cost while ensuring revenue integrity with e4health's holistic approach to patient data accuracy. From data migration to validation and eMPI remediation, e4health offers strategic solutions, technologies, and expert teams for both traditional day-to-day HIM operations and major change events.

Measurable, Value-Driven Results

e4health successfully delivers programs that save time, reduce cost, solidify information governance, and boost revenue integrity. Through our proprietary performance and project management software, we present real-time reporting and results to ensure the success of your organizational initiatives.

Depth of Domain Knowledge

Expert HIM-credentialed teams, intelligent automation, and experienced project managers ensure the highest levels of quality, speed, and data integrity across any initiative.

Mid-Revenue Cycle Breadth

e4health works across HIM and HIT with leadership to address every function: migration, coding, documentation, data abstraction, and productivity and analytics.

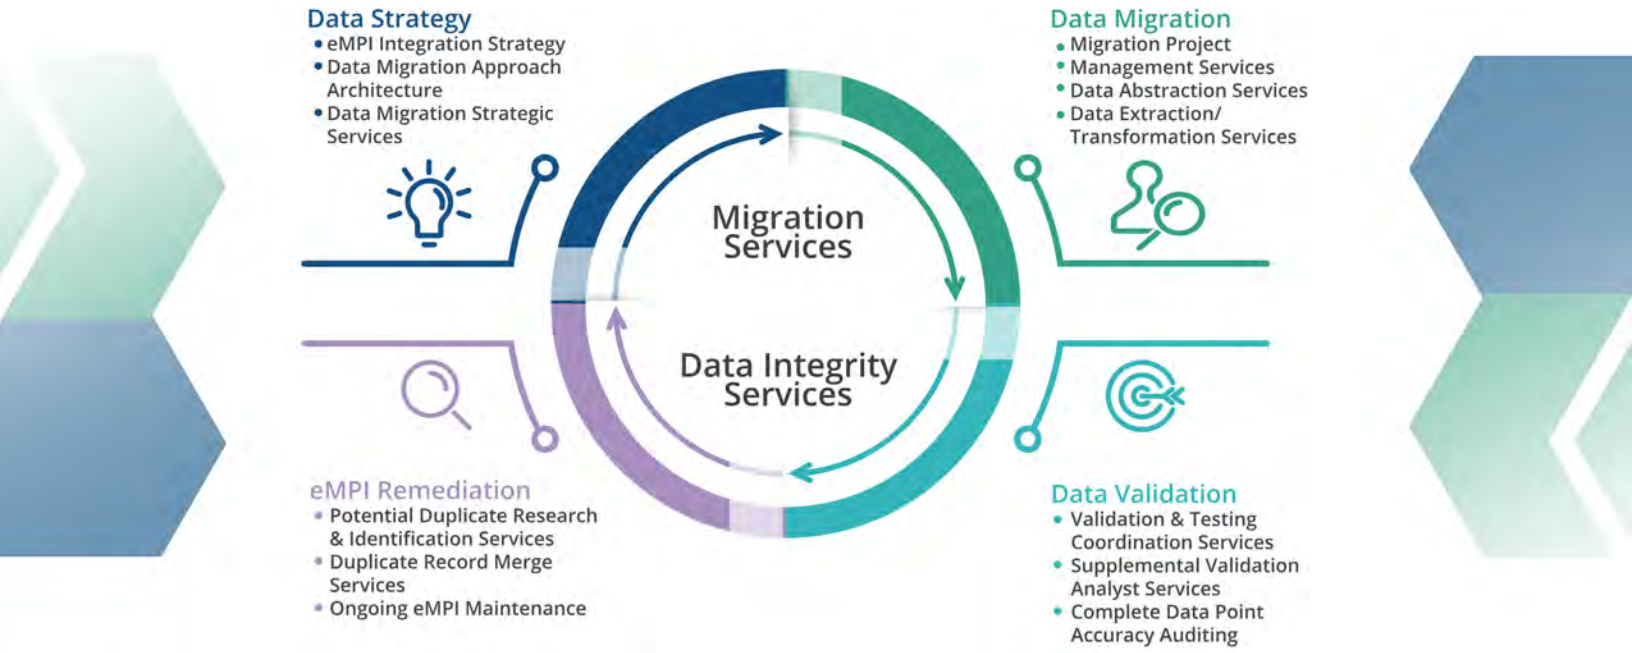
Health Information Management Solutions

Health information departments have undergone a dramatic shift over the past decade. Most departments now work remotely, new reporting structures are in place, and traditional tasks are digital. As these health information professionals expand into revenue integrity, information governance and clinical data accuracy roles, new management needs arise. And a more strategic and holistic approach is needed. This is where e4health comes in.



eMPI Cleanup & Remediation

Achieve a clean, accurate master patient index and improve patient safety. No one starts faster.

Interim Leadership & Staffing

Harness e4health's insights and expertise in various settings, hospital sizes and case mixes.

Clinical Data Abstraction

Quickly target patient accounts that need data migration or chart prep.

Scanning, Indexing, Recovery

Rapidly identify gaps and waste to improve document digitization, productivity, and quality.

Legacy Data Migration & Validation

Ensure patient data is transferred securely, completely, and accurately to improve clinician trust in quality migrated data.

HIM Productivity & Software Solutions

Easily capture and report workflow productivity, and identify and remediate duplicate data across EHR and revenue cycle systems.
